Education

**Admiral Makarov National University of
Shipbuilding** (2021-2025)

Bachelor's degree in Computer Software
Engineering

Mykolaiv Art School (2014-2019)

About me

I am currently a student, specializing in software engineering. My skill set includes proficiency in object-oriented programming (OOP) and ongoing development in Java programming. Also, I am currently working on my JavaScript skills. Additionally, I have practical experience using GitHub and am expanding my expertise in database management.

Projects

rental-app

Lead Developer

Duration: 3 month

Objective: This is a web application for managing the rental process of tourist equipment, including inventory management, customer information handling, and payment processing.

Key Actions: Implemented features to monitor rental dates and streamline the end-to-end rental workflow, ensuring efficient operations and a user-friendly experience.

Technologies Used: JavaScript, css, MySQL database, React, Node.js

my-ToDoList

Lead Developer

Duration: 2 month

Objective: This project is a user-friendly Todo List application, offering features such as creation, management, and deletion of todo items.

Key Actions: It provides functionality for create, edit, and delete tasks, then sort them by completion status for ultimate organization.

Technologies Used: JavaScript, css, React

Registration of students living in a dormitory

Lead Developer

Duration: 1 month

Objective: This project is a comprehensive Student Dormitory Management System designed to streamline operations for administrators, accountants, and dormitory staff.

Key Actions: It provides functionality for managing student information, dormitory information, room allocations, events, payments, and additional services.

Technologies Used: Java, Git, html/css, Spring, Mariadb database
